Subject: RE: EPA request for GWMA Nitrate data

Carol –

Happy Friday. Just a quick email to acknowledge receipt and to express my appreciation for your help in packaging this information for us. I'm taking a look at the data now and will be in touch if I have any questions. I'll also keep you in the loop on our planned next steps...when we are sufficiently clear on that path.

Moore soon...

Subject: RE: EPA request for GWMA Nitrate data

Hi Adam,

Please find attached the following items pertaining to your request for nitrate data in the Lower Umatilla Basin Ground Water Management Area. I included data from 2010-2019.

1. An Excel spreadsheet from the Domestic Well Testing Act (DWTA) real estate transaction database at OHA with
 - a. All Morrow County nitrate results (n=28)
 - b. All Umatilla County nitrate results (n=47)
 - c. Lower Umatilla Basin Ground Water Management Area (LUBGWMA) results only (n=60), sorted by sample ID, well city, town & range.
2. The OR DEQ map for the LUBGWMA with the boundary details and map I used to sort the data.
3. A presentation given at the Oregon Public Health Association meeting in Oct. 2019 that includes information about the Domestic Well Safety program and updated summary data for the 3 DWTA contaminants (arsenic, nitrate, total coliform/E. coli).

As I mentioned during our phone conversation last week, Oregon Health Authority receives approximately 20% of the real estate transaction test results. The testing labs have additional nitrate data, though the labs don't all keep records about which tests are

from real estate transactions. DEQ has additional data from the groundwater monitoring programs, some of which includes private domestic wells.

Please let me know if you have questions about the information I've provided or you would like additional data. I'm interested to hear updates about EPA's work related to nitrates in Oregon groundwater.

Thank you,

Carol
